

The diagram shows a cross-section of a wall and ceiling assembly. On the left, a vertical wall is shown with a sloped roofline above it. The wall assembly consists of an exterior plaster layer, a stucco layer, and a gypsum board (GYP BD.) ceiling layer. A ceramic tile or cement board is attached to the exterior of the wall. The ceiling assembly consists of a plaster soffit, a stucco layer, a gypsum board (GYP BD.) ceiling layer, and a ceramic tile or cement board. The diagram uses various line styles to represent different materials and components, with blue circles indicating specific points of interest or connections.
