

Web Update Enhancement List

Revit Architecture 2008

Improvements made in the current Web Update SP3 build (20071109 2345):

- Allows the ability to array face-based families placed on a vertical face.
- Allows the ability to maintain face-based instances on curved surfaces of a Revit file linked into Revit Architecture software when the link is unloaded.
- Improves stability when selecting sections.
- Allows the ability to insert an electrical receptacle into a legend view.
- Improves stability when accessing the Help menu in Revit Architecture on a computer with the Microsoft Windows Vista™ operating system.
- Improves stability when applying a view template to a sheet.
- Improves performance when views contain many objects with overridden graphics by element.

Improvements made in the previous Web Update SP2 build (20070810 1700):

- Improves stability after receiving a corrupt element warning when opening a project.
- Publish to DWF™ functions when Rooms are present and are clipped by the viewport.
- Improves stability when saving a Project with a linked DWG™ file that contains an image.
- Improves stability when applying a view template to a sheet view.
- In Windows Vista™ operating system, allows the ability to write to revit.ini, licpath.lic, KeyboardShortcuts.txt, and the Journals folder.
- Line based families contained in a group are no longer flipped when the group is mirrored.
- Improves stability when importing group into Titleblock family.
- Allows the ability to export renderings to TIFF format.
- When temporary dimension text too small to read, user can adjust the size of the font through Revit.ini.
- Linked DWG added by another user will now show up in Manage Links after reload latest.
- “Relative” spot elevation updates automatically with the change in Level elevation.
- When exporting to DWG, overlapping lines that share a point are no longer missing in the resulting DWG file.

Improvements made in the previous Web Update SP1 build (20070607 1700):

- Improves stability when importing .dwg or .dxf with the presence of an older version of DWG TrueView™ installed on the computer.
- For a selected Line, Hide Category in View no longer affects all Categories of Lines.
- Some Detail, Plan, or Section Callouts are no longer erroneously hidden in cropped views.
- Masking Regions in Tag Families will now obscure elements in project and in exports.
- Filled Regions containing Solid Fills, which are overridden to be Transparent, now print consistently between Vector and Raster modes.
- Improves stability with Overlay Planes turned off in Graphics Settings.
- Crop Regions which were previously missing are now visible in Views in upgraded files and templates.
- Display problems in a view no longer occur when zooming with OpenGL® hardware acceleration turned on.
- Copying nested links from the Project Browser places the Link and its nested components.
- Elements refresh in views when deselected.
- Product Registration for multiple products in Subscription no longer returns “Invalid Serial Number.”
