

Desired Result - Example depicts section of a 7" ramp slab with 34" x 24" concrete beams

Initial result within Revit after placing unmodified 34" x 24" beam (z-justification set to top)

This configuration looks correct once the slab and beam are joined geometry, but analytical and quantities information are now invalid.

Typical result within Revit after placing unmodified 34" x 24" beam (z-justification set to bottom)
